Background

- Urban agriculture (UA) represents a growing movement toward transforming vacant lots, backyards, and even rooftops into productive green spaces.
- Like any urban green space, urban farms and gardens can help improve air quality, moderate temperatures, and reduce storm water runoff.
- For many inner-city residents, urban farms and gardens may also be the only places where they can regularly experience nature.

What will we develop?

- Educative Awareness videos on ecological and urban agriculture development
- Training curriculum and training course on ecological and urban agriculture for small farmers
- Interactive mobile application for urban eco-farmers

Target groups

- Adults (low skilled, low qualified, NEETs, people with disabilities)
- Existing urban agriculture small farmers
- Adult educators
- Adult training centers
- Lifelong learning centers
